

LIGHT HEXAGONAL WIRE MESH

Light Hexagonal wire mesh is also known as twisted wire mesh, stone cage net, gabion wire mesh or flood network.

Assortments:

Light hexagonal wire mesh, mighty hexagonal wire mesh, PVC coated hexagonal wire mesh and **galvanized hexagonal wire mesh**. Galvanized hexagonal wire mesh could also be classified as hot-dipped galvanized, electro galvanized, PVC coated galvanized wire mesh, etc.

Material: low carbon steel wire, stainless steel wire

Weaving Methods: positive twisting, reverse twisting, double twisting, weaving before galvanizing, weaving after galvanizing.

Features:

firm structure;

smooth surface;

well anti-corrosion and anti-oxidation

Application:

Safety fences for zoos, keeping chickens, ducks and rabbits;

Machinery and equipment protection;

Highway guardrail and sports fences;

Fences for road green belt protection

Besides, after it is made into box-shaped containers, hexagonal wire mesh would be filled with stone, which would be excellent material for flood control and could be used to protect and support seawall, hillsides, road and bridge, reservoirs and other civil engineering.
